

- Update March 2019 – eMS deliverable issue

For information to all applicants

eMS has a technical issue over a specific number of deliverables attached to an activity within a work package. This is a database fault and not an error from the applicant.

If there are 2 deliverables attached to an activity, the second deliverable is overwriting the first deliverable, even after saving the original data entry. There are no issues with any other number of deliverables i.e. 1, 3, 4, 5 etc.

Therefore, as a temporary fix, if your work package activity has two deliverables, please add an additional deliverable and label it "N/A". This should ensure no errors with overwriting and additional work for the applicant.
